

Astronomie (5)

Filesize: 5.81 MB

Reviews

The book is great and fantastic. It is rally exciting throgh reading time period. I am pleased to let you know that this is basically the greatest ebook i actually have go through inside my very own life and may be he best book for possibly.

(Mr. Hyman Ankunding DDS)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 34 pages. Original publisher: Silver Spring, Md. : U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, National Ocean Service, Office of Ocean and Coastal Resource Management, Marine Sanctuaries Division, 2005 OCLC Number: (OCoLC)122525719 Subject: Marine mammals -- Effect of noise on -- Massachusetts -- Stellwagen Bank National Marine Sanctuary. Excerpt: . . . a point source but a property of the medium. Transmission loss is a general term representing the sum of spreading, attenuation, and refraction losses (Urick, 1983). Spreading refers to the weakening of sound as it travels away from a source. With respect to ambient noise, it pertains to that portion of the noise field measured at a distance from one or more of the components such as seismic events, storms, shipping or biologics. Spreading is quantified as a function of geometry with respect to the source. In deep water or within the surface bottom boundaries of a body of water (referred to as one water-depth) the sound will radiate from the source in all directions as a sphere. This is known as spherical spreading and the rate of decay of sound can be calculated outward from the source to a distance of one water-depth as: $TL = 20 \log r$ where TL is taken to be spherical spreading loss and r is the radial distance from the source. Once the radial distance equal to one water-depth has been reached from the source, the surface and bottom boundaries interfere (since the sound cannot cross the boundaries) and spherical spreading is no longer able to take place. At this point cylindrical spreading occurs and the subsequent decay of sound is calculated as: $TL = 10 \log r$ where TL is taken...
